

YallaPark

Smart urban parking management for Dubai — pre-book, pay digitally, and park with certainty.

BY SASHINI MANIKANDAN · PARTH SANJAY BADGUJAR · NIKHIL MUNDHRA

Made with GAMMA

What Is YallaPark?

YallaPark is a smart mobility initiative transforming urban parking in Dubai. Motorists **pre-book spaces and pay digitally** before arrival — eliminating the need to circle congested areas like Bur Dubai and Karama.

30%

Traffic Searching

Of all urban traffic is vehicles circling for parking

20 min

Avg. Search Time

15–25 minutes lost per driver hunting for a space

Reserve & Secure

Booked slots are secured upon payment, ensuring efficient space utilization.

Extend Flexibly

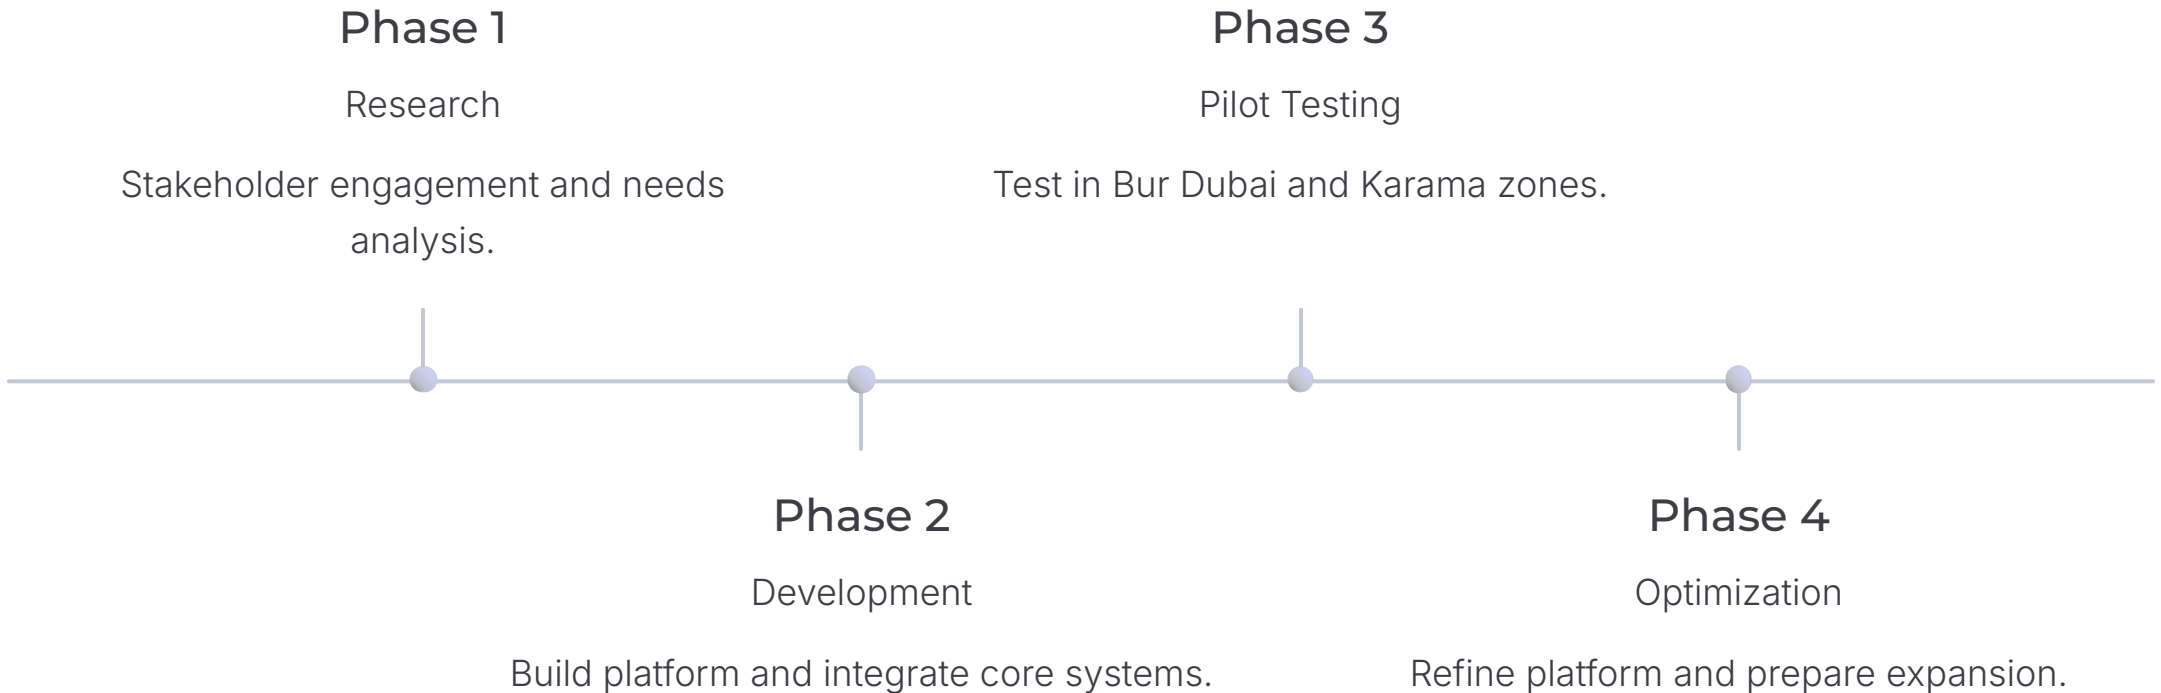

Users can extend parking duration directly through the app.

Inclusive Design

Dedicated visibility for women-only spaces and delivery rider zones.

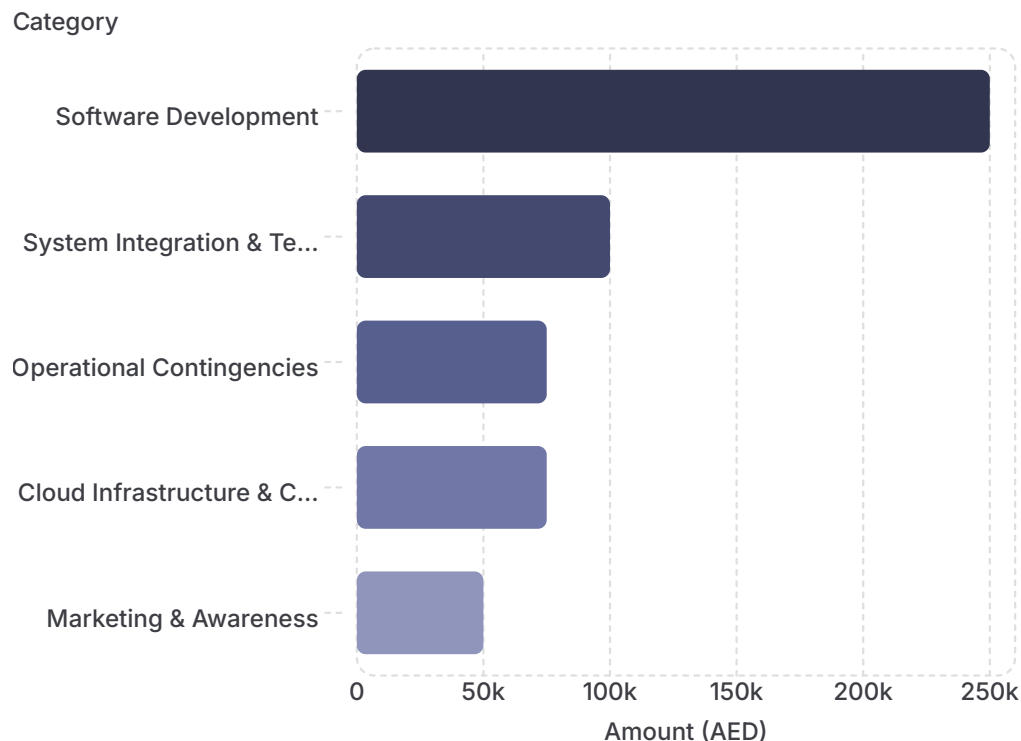

Planning & Implementation

A **6–9 month pilot** launches in high-demand zones — Bur Dubai, Karama, Deira, and Downtown Dubai — before scaling citywide. A multidisciplinary team of developers, designers, data analysts, and transportation planners oversees deployment. Core technologies (digital payments, geolocation, reservation systems) are proven globally, making requirements highly realistic.

Pilot Phase Costing

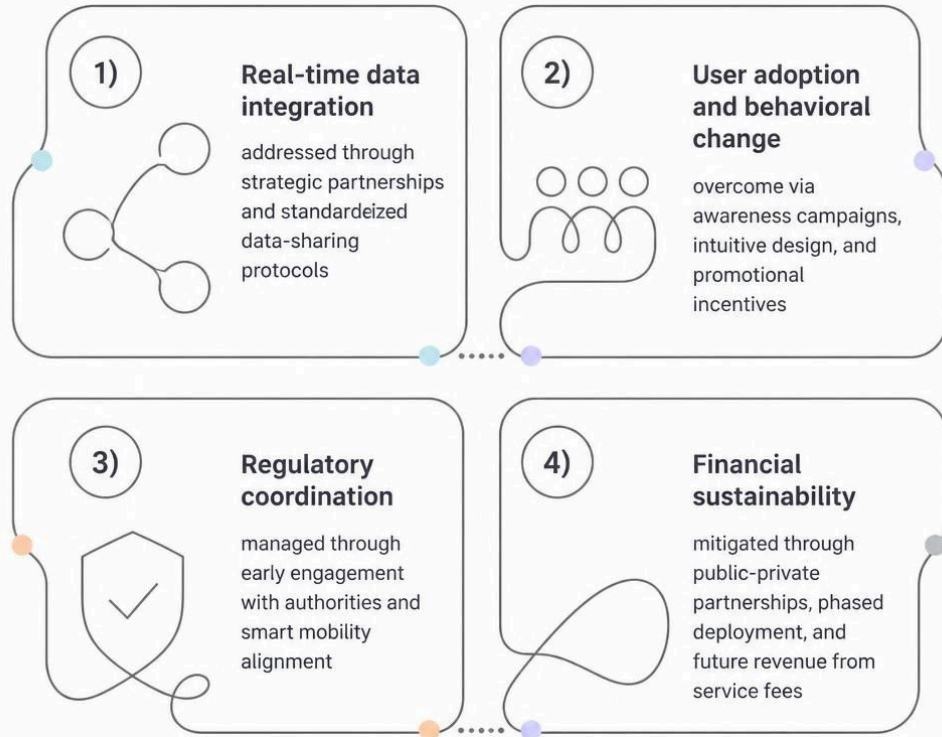

Total Pilot Investment: AED 600,000

Serving **20,000 users** across selected high-demand parking zones.

📄 **AED 30 per beneficiary** — calculated as AED 600,000 ÷ 20,000 users. Cost per beneficiary is expected to decline significantly as the platform scales.

Key performance metrics include reduction in average parking search time, decrease in traffic congestion within target zones, parking space utilization rates, and reduction in vehicle emissions caused by unnecessary circulation.

Challenges & Adaptation

Global Inspiration, Local Innovation

YallaPark draws from successful smart parking models in **Singapore, the UK, and Europe** — adapting proven technology to Dubai's unique needs: women-only spaces, delivery rider zones, and RTA ecosystem integration.

The concept is highly transferable to other emirates, GCC countries, and dense urban centers facing similar congestion challenges.

Standards Alignment

SDG 9

Industry, Innovation & Infrastructure — intelligent mobility and digital transformation.

SDG 11

Sustainable Cities & Communities — cleaner, more efficient urban environments.

SDG 13

Climate Action — reduced emissions through less unnecessary vehicle circulation.

YallaPark aligns with **Dubai's Smart City vision** and **UAE Net Zero 2050**. Safety Compliance Potential targets **90%+** through secure transactions, accessibility features, and compliance audits with relevant authorities.

The Problem: Evidence & Stakeholder Feedback

Research Shows

30% of traffic in commercial districts is drivers searching for parking — causing extended search times of **15–25 minutes**, increased congestion, emissions, and operational delays for delivery riders.

Shaped by Real Voices

Feedback from students, professionals, female drivers, and delivery riders drove key features: **guaranteed pre-booking**, women-only space visibility, dedicated delivery zones, and in-app parking extensions.

Community Inclusivity

Women-Only Spaces

Dedicated visibility of women-only parking supports safety and convenience for female drivers.

Delivery Rider Zones

Designated quick-drop zones acknowledge the operational needs of a growing delivery workforce.

Accessible by Design

Multilingual, intuitive interface accessible to users with varying digital literacy and mobility needs.

Diverse Perspectives

Design informed by feedback across age groups, genders, occupations, and cultural backgrounds.

Results & Impact

Strategic Fit

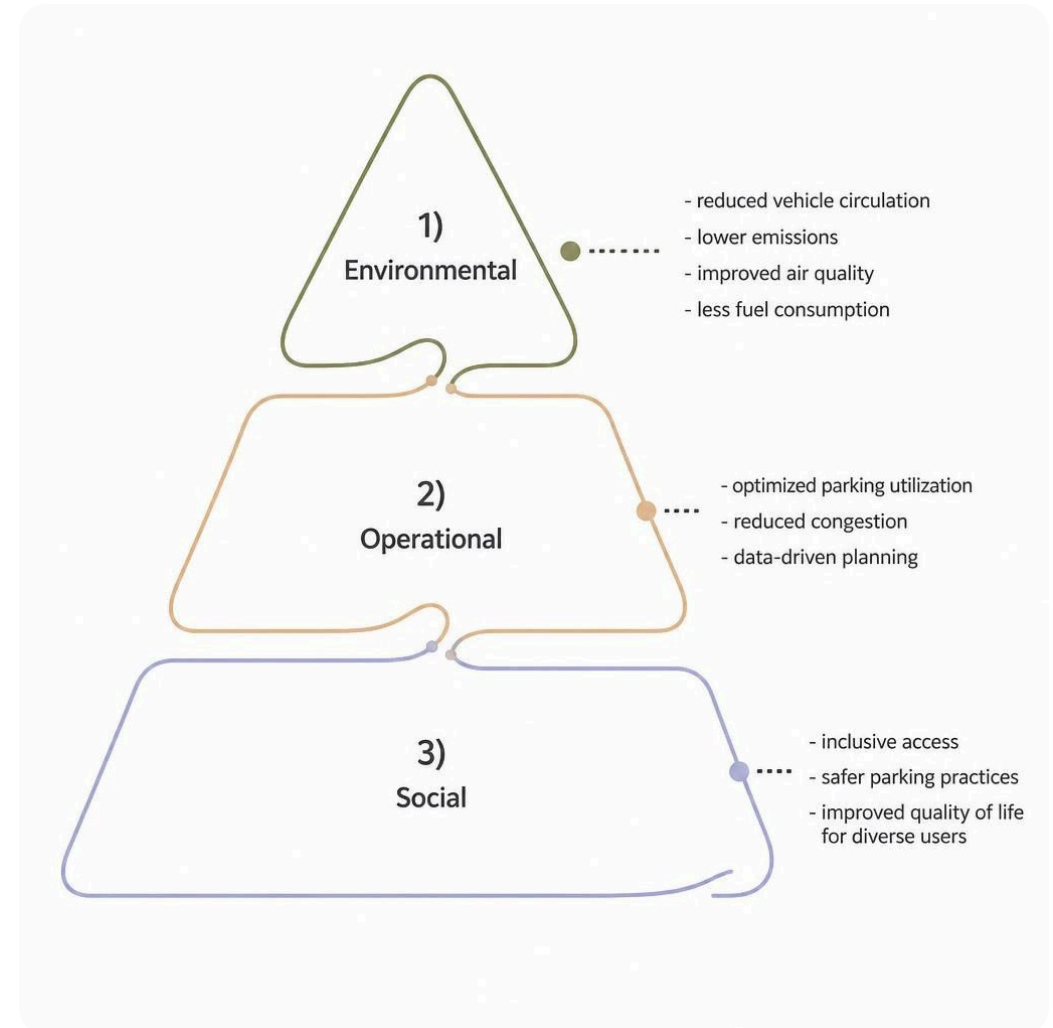

YallaPark aligns with UAE national objectives for **intelligent transport, digital transformation, and sustainability** — optimizing existing infrastructure rather than expanding it.

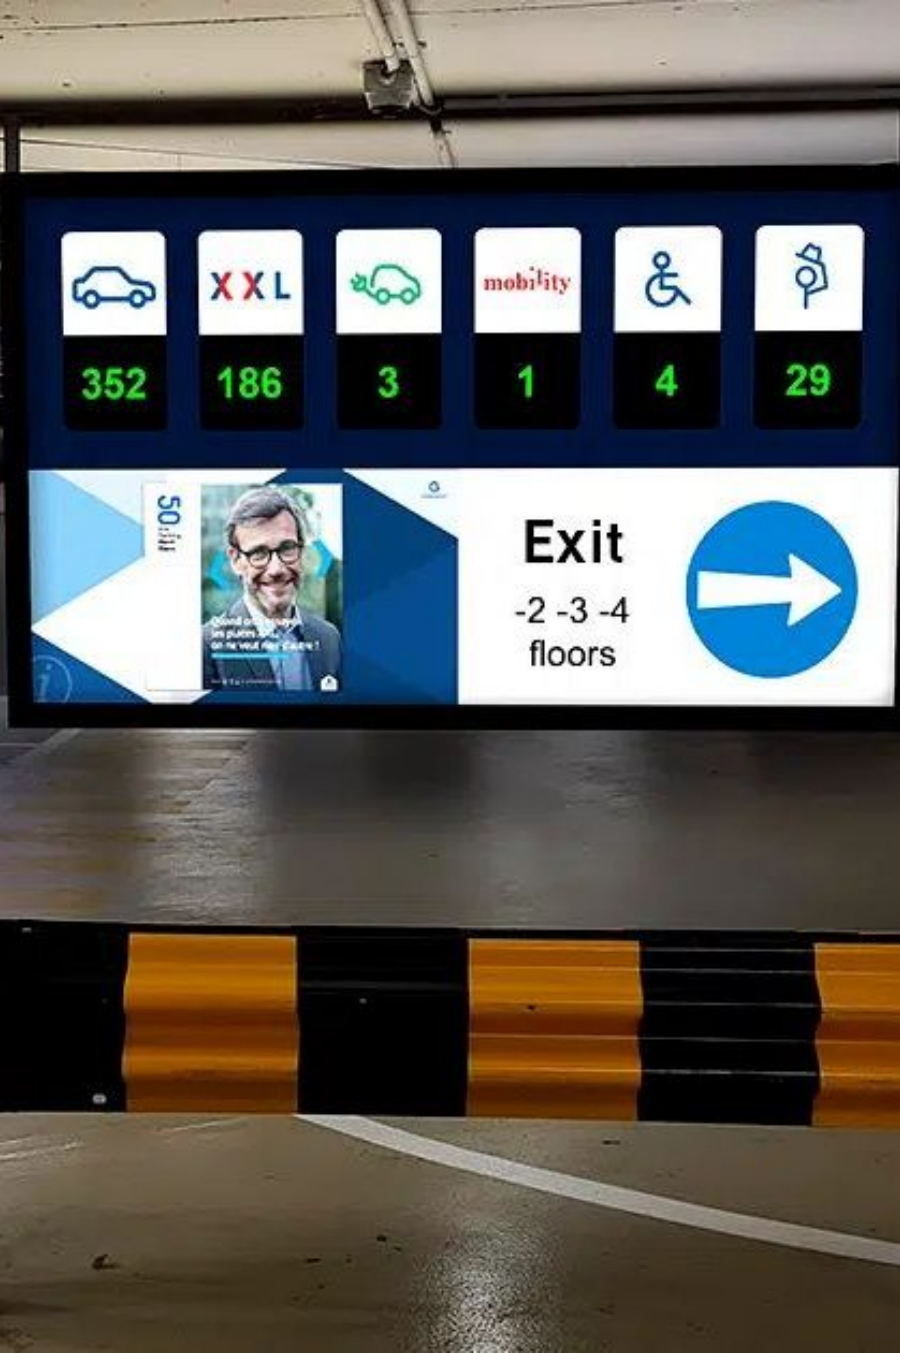

Environmental Gains

Reduced parking search time translates to **lower CO₂ emissions, improved air quality, and reduced fuel usage** across thousands of daily users.

Scalability

The platform is transferable to other emirates, GCC countries, and global urban centers.

Why YallaPark Stands Out

Practical & Scalable

Leverages existing parking assets — no major infrastructure investment required.

Comprehensive Solution

Combines reservations, digital payments, real-time monitoring, extensions, and inclusivity in one platform.

Data-Driven Future

Generates mobility insights to support evidence-based urban planning and transport policy.
